Release notes

Article • 8/1/2024 • 1 min read

To view what’s new or changed in each release of the Aptean Initialize for Food and Beverage extension, select the specific release version.

Date	Release version	Description
August 2024	2401.2.0.0	Stability release
May 2024	2401.1.0.0	Stability release
February 2024	2401.0.0.0	Feature release
November 2023	2301.0.0.0	Initial release

2401.2.0.0

Release Note • 8/1/2024 • 1 min read

Enhancements/Modifications

With this release of the Aptean Initialize for Food and Beverage extension, enhancements have been made to update the initialization process within the application to handle the *User Group* and *User Group Permission Set* tables. This change ensures compatibility with current and future versions of Business Central, even when the *User Group* and *User Group Permission Set* tables are removed.

! Note

The *User Group* and *User Group Permission Set* tables are removed in Business Central, version 25.

2401.1.0.0

Release Note • 5/9/2024 • 1 min read

Enhancements/Modifications

With this release of the Aptean Initialize for Food and Beverage extension, enhancements have been made to address a code modification within the system application related to the user's permission check. This optimizes the extension's installation process, ensuring a seamless deployment experience for users.

2401.0.0.0

Release Note • 2/7/2024 • 1 min read

Features

This release of the Aptean Initialize for Food and Beverage extension includes the following features:

- Permissions are added to users and user groups during app installations. This ensures that permission-related procedures are stored in a unified location, simplifying management and eliminating code redundancy across various apps.
- Users receive permissions based on their company access. Permissions are applied across all companies if a user has no assigned companies. This refinement simplifies the permission assignment process, ensuring accurate alignment with user-company relationships.
- The DisplayInRoleExplorer code, which is responsible for showcasing permissions within Business Central's role explorer, has been transferred to this extension. This transfer facilitates invoking the code with parameters like AppID and Profile, allowing for more flexible and configurable usage.

2301.0.0.0

Release Note • 11/28/2023 • 1 min read

Features

The Apteian Initialize for Food and Beverage extension is designed to streamline the initialization of the other Apteian extensions, ensuring thorough regression and integration testing for optimal product quality. This extension includes the following features:

- Integration of the publisher app's dependency into every Test App, enhancing the setup process for test permissions and refining its functionality.
- Extending the publisher app's dependency across Activate, Accelerate, and Advanced bundles for each core application, facilitating seamless subscription purposes within these bundles.

Introduction

Article • 11/28/2023 • 1 min read

The Apteian Initialize for Food and Beverage extension serves as the initial step toward creating a seamless and error-free user experience. As a publisher application, it broadcasts events related to permission sets, acting as the foundation for the entire application and ensuring a secure user experience.

During the initialization process, this extension verifies that the user has the necessary permissions to access all the features within other extensions. It is responsible for communicating these permissions to various modules and components. Without this functionality, other extensions would encounter operational limitations, hindering users' ability to access the available features.
